

- 1) 2 friends had some money to buy a present for their friend, Carlos.

Petra

I bought Carlos a present. I have spent 60% of my money and I have £20 left.

Jake

I bought Carlos a present. I have £18 left, this is 0.3 of the money I started with.

Circle true or false for each statement and write calculations to show how you know.

- a) Petra's present cost more than Jake's present.

True/False

- b) The total amount of money Petra and Jake started with was less than 0.8 of £150.

True/False

- 2) Toni has set herself a target of running at least 6km over 4 days. This is how much she has ran so far:

Day 1: 25% of the target

Day 2: $\frac{2}{5}$ of the distance covered on Day 1

Day 3: 0.9km

Key fact: 1km = 1000m

Has Toni got more or less than 30% of her target to complete? Show how you know.
