

Counting

MS4b: Counting On

6

Jumps

$$52-35$$

What methods might you use to solve this question mentally?

MS4b: Counting On

My name is _____
6 Jumps

Solve the following problems mentally.

$$56 - 34$$

$$86 - 53$$

$$102 - 57$$

$$87 - 43$$

Rounding

21/09/20

To round any whole number to a required degree of accuracy.

Retrieval Practice

**Round the number below to the nearest
10,000, 100,000 and 1,000,000.**

**Six million, eight hundred
and six thousand, five
hundred and twenty-four**

**Round the number below to the nearest
10,000, 100,000 and 1,000,000.**

10,000: 6,810,000

100,000: 6,800,000

1,000,000: 7,000,000

**Six million, eight hundred
and six thousand, five
hundred and twenty-four**

Nicolas is rounding numbers to the nearest million.
He says,

I think that seven million, four hundred and fifty thousand, nine hundred and eighty rounded to the nearest hundred thousand is 7,000,000.

Is Nicolas correct? Explain, giving reasons for your answer.

He is incorrect because...

Have a go at answering this question. A good answer is on the next slide.

Reasoning 2

Nicolas is rounding numbers to the nearest million.
He says,

I think that seven million, four hundred and fifty thousand, nine hundred and eighty rounded to the nearest hundred thousand is 7,000,000.

Is Nicolas correct? Explain, giving reasons for your answer.

He is incorrect because his number is 7,450,980 and it has fifty thousands which means that it would round up to the next hundred thousand. This would mean that the number becomes 7,500,000.
